

A. Waris

Senior Software Engineer

abdulwariis@gmail.com
Pakistan

I'm an experienced software engineer driven by a passion for creating innovative solutions that make a true difference. Over the past 5+ years, I have honed my skills in full-stack development and cloud technologies while working on diverse projects - from concept to launch.

I pride myself on being a thoughtful architect who can balance usability and technical excellence. Collaboration is core to my approach. I enjoy bridging the gap between engineering and product teams to ensure we build what users want and need.

Staying up-to-date with the latest advancements comes naturally to me. I'm just as excited to share knowledge and mentor others as I am to learn. Above all, I'm practical. I care about getting things done the right way.

The products I build solve real-world problems. That motivates me. I want my work to matter. Whether leading projects or contributing as an IC, my goal is always to deliver something meaningful using my full range of skills.

I believe better is always possible if we stay curious, empathetic, and adaptable. I could not imagine a more rewarding career than using technology to make a lasting human impact. That's what continues to drive me.

Employment History and Projects

ThirdElevation, (Remote) Brooklyn NY, USA
Senior Backend Engineer

August 2023 – Present

Image Analysis Tool for Digital Marketing (MVP)

Description: Python-driven MVP in the works: an image analysis tool aimed at boosting brand conversions on major ad platforms.

- Created **Python FastAPI** project that utilized **OpenCV** and **Scikit-learn** for image processing and extracting insights to help make images better. Used **Github Workflows Actions** with a sponsored **AppMap** action, used **Pydantic** for request/response validation with type safety, and added Unit Tests using **Pytest**,

Go Contact Form Functions

Description: Contact forms serverless functions that store the contact form data into a database and send an email notification to the team and the user concurrently.

- Developed and deployed the entire project with **GoLang**, **DigitalOcean SLS & Functions**, **Mailgun** (smtp) client, **Go SQL Driver** to handle the heavy user traffic utilizing **Go Routines**.
- Saved substantial costs previously paid to third-party services, and provided the email marketing team with more refined control by catering to their custom needs.

Luxel Materials and Processes Portal

Description: LUXEL is the premier fabricator of the world's best filters and filter material & thermal evaporation equipment. Its portal app lets you manage processes and materials catalog.

Highlights:

- Worked on fixing several API bugs on a **Django Rest Framework** and **Express.js servers** using **AWS S3**, **Lambdas**, **Postgresql**

Kafka Streams with Join POC

Description: A small project for joining the data from 2 different topics and publishing it to another topic.

Highlights:

- Developed Spring Boot Restful API with **Hibernate, Gradle, Spring Data JPA, Spring Kafka** for **Kafka Streams** and Listeners/Producers, **MySQL** database

Realleads Inc, (Remote) Lenexa, Kansas, USA
Senior Software Engineer

January 2021 — August 2023

SKU World CRM

Description: ERP data management and products integration tool

Highlights:

- Orchestrated the upgrade of the SKU World front-end project from **Angular 10 to 14**, resolving development environment configuration issues and enhancing its **UI**.
- Developed back-end APIs in **C#** and **.NET Core 3.1**, leveraging **Azure Blob Storage, Azure SQL Databases, and Azure Functions** for robust data management.
- Built the Customer Portal from scratch using **Angular 15** and **Tailwind CSS**. Designed as a **multi-tenant** application, the portal offers customized, CRUD-intensive interfaces for various builders.
- Designed and implemented an **Azure Cognitive Search** wrapper to be used in Angular with a paginated **auto-complete search**
- Developed a sub-project - Field Mapping Extension for SKU World:
- Smart and light-weight **Vue.js + Vuetify** based tool to map source fields of products, seamlessly integrating it into the main Angular application through **Azure Static Apps**.
- Helped with onboarding the first builder tenant with **data migration** and **SAAS** setup.
- Designed and implemented a **Generic Repository** for repetitive CRUD operations in C# .NET Core and Angular inspired by [Spring Boot - CrudRepository](#) and published their how-to guides on my [Medium](#).

HHA Exchange Portal

Description: Home care management software that connects providers, state medicaid programs, managed care organizations (MCOs) and patients

Highlights:

- Helped with the migration of a legacy healthcare system, starting off with Payroll and Employee modules, from **VB.NET** and **JavaScript** to **Angular** and **ASP.NET Core micro-services**.
- Authored Transact-SQL (**T-SQL**) scripts for bulk operations and CRUD **Stored Procedures**, facilitating seamless integration with the new application architecture.
- Employed **ScriptDom** parser for programmatic parsing of T-SQL statements and expressions, ensuring accurate data migration and system functionality.
- Utilized **Dapper** for SQL Command, **SQL Query**, and Stored Procedure execution, enhancing database interaction and performance.
- Implemented table aliasing scripts to decouple schema dependencies, enabling a smooth transition to the new micro-services based database architecture.
- Configured **GitHub workflows** and actions to set up CI/CD running **unit tests** for .NET Core with **NUnit, SonarQube** code quality scanner, **Docker** image creation, and build compilation.

SellifyCRM

Description: Sellify is an affordable, feature-packed customer relationship management (CRM), document management (DMS), and business process management (BPM) system.

Highlights:

- Built on a robust **AWS Serverless** architecture, the system integrates **Lambdas** written in **Python 3.8, AWS API Gateway, Cognito, SQS, and SES** for notifications.
- With **Next.js** powering the front end, the deployment was managed using **AWS SAM (Serverless Application Model) as IaC (Infrastructure as Code)**.
- It serves as an indispensable tool for over 10,000 sales agents, optimizing their workflows and boosting productivity.

Tax CMS

Description: TaxBox Portal is a software that streamlines and centralizes accounting operations, making it easier to access and send important tax documents. If other SAP products are being used, they can be integrated with this platform's tax management software

Highlights:

- Developed a specialized search engine using **.NET Core 7, Background Services** managed via **HangFire, Elasticsearch, AWS S3, and MSSQL** Server processed over 1 million tax-related articles, providing invaluable insights. Built on **Next.js, TypeScript, ESLint, Prettier, Husky, Lint-Staged, Jest, and Commitlint**.
- Designed the subscription process and workflow and its integration with **Stripe**.

ResourceInn, Lahore, Pakistan
Technical Recruiter

September 2022 – October 2022

- Developed a comprehensive candidate evaluation system that identified top talent and improved hiring decisions
- Collaborated with hiring managers to develop job descriptions that accurately reflect the requirements of the role and attract the right candidates
- Created a talent pipeline of qualified candidates for various positions, resulting in substantial decrease in time spent sourcing new hires

ResourceInn, Lahore, Pakistan
Application Development Consultant

February 2022 – March 2022

ResourceInn HRMS

Description: An all-in-one HR software empowering businesses across the world

- Helped with migration and upgradation of their backend server built on **Laravel**
- Improved Developer Experience(**DX**) Processes

Geekinn, Lahore, Pakistan
Senior Software Engineer

July 2020 – January 2021

Real Estate Marketplace App and Infra (USA and Canada)

Highlights:

- Engineered **Node.js** based **micro-services**, hosted and managed via **PM2** on **AWS EC2** servers, to create a scalable and reliable backend infrastructure.
- Developed API micro-services using **Laravel/Lumen**, integrated with a **Java Spring Boot API Gateway** and Service Discovery, to create a cohesive and efficient service architecture.
- Implemented AWS services including Lambdas in C#, Step Functions, **CloudWatch** logs, **DynamoDB**, and **Elastic IP**, further enhancing system robustness and scalability.
- Orchestrated the migration of an **Angular**-based Real Estate Marketplace app to Next.js, focusing on achieving blazing-fast performance and an impressive UI/UX.
- Utilized **BitBucket** and **GitLab CI/CD Pipelines**, while employing **Jira** and **Confluence** for effective project management.
- Used a **monorepo** using **Lerna**, containing a client-facing **Nuxt.js** application and an Admin Portal **CMS** built in **Vue.js** and **Vuex**, for comprehensive management of Agent's Listings, Offices, and Teams data.
- Upgraded an existing Nexus Repository Manager hosted on an **EC2** server, ensuring compatibility and performance improvements.
- Configured a **PHP SAML** server to act as an Identity Provider for **Okta**, enhancing security protocols.
- Wrote **GraphQL** queries and mutations for person API - the server was wrapper around **ElasticSearch** indices.
- Implemented a Consent Feature on the **CMS**, leveraging **Twilio** for SMS-based user consent collection, complete with end-to-end test coverage in Cypress.
- Implemented a Popular Searches Nearby Feature in **C# lambda** and ElasticSearch.
- Wrote a translator **Node.js script** to perform English to French Translations based on a source Excel file. The output was a JSON that was intended to be consumed in **Next.js** project.
- Authored extensive unit tests using **PHPUnit** and established a pipeline stage for linting, utilizing **PHP Fixer** to ensure code quality.

Hashloops
Tech Stack Consultant

January 2020 – August 2023

- Developed a **technology roadmap** that enabled the company to keep pace with industry trends and stay competitive in the market
- Streamlined the development process, **reducing time-to-market** for new projects substantially

Geekinn, Lahore, Pakistan
Software Engineer

July 2019 — July 2020

Property Validator Tool

Highlights:

- Worked on a Property Validator Tool, leveraging **Vue.js** and **Vuex** to create a robust, user-friendly interface to manage complex data
- Orchestrated asynchronous tasks through **Laravel Jobs**, and designed a user interface for **cron job scheduling** and management using Laravel's built-in scheduler.
- Integrated multiple data sources to synchronize with the validator tool, ensuring comprehensive and up-to-date information.
- Utilized the Real Estate Transaction Standard (**RETS**) Listing **Search API**, a legacy XML-based standard, to fetch and replicate MLS listing and roster data to a local database.
- Established secure **SSH** connections between backend API servers and external secured servers, enabling automated script executions for data synchronization.
- Introduced an **MLS Listing Field Mapping** feature, allowing users to map source fields to destination fields with an option for manual overrides.
- Integrated and executed new queries and mutations for Persons API (PAPI), a **GraphQL** layer on an Elasticsearch cluster, to facilitate seamless data consumption.
- Employed MySQL and **PostgreSQL** for general data storage, while utilizing **Elasticsearch** for storing real estate listings and their corresponding data.
- Integrated a feature to display **Kubernetes** logs directly from Pods using **kubectl**, while also providing a user interface option for restarting failing pods, enhancing system monitoring and operational efficiency.

GreyNeon, Lahore, Pakistan
Junior Software Engineer

May 2019 — July 2019

Order-Taking App

Description: for a Leading Restaurants Chain

Highlights:

- Engineered a location-based promotions feature, leveraging native PHP to accurately determine **Geolocation** without reliance on third-party services and created **Proximity Service API**
- Integrated **Google Maps API** within a **Vue.js** framework to dynamically assess whether a user's current location qualifies for location-specific promotions, represented as polygonal areas.
- Developed a real-time, interactive menu interface featuring flexible nested categories, enabling intuitive navigation and effortless reordering of menu items via drag-and-drop functionality.
- Introduced the "My Bowl" feature, empowering users to customize their meals by selecting from an array of available ingredients, that **enhanced user engagement** and satisfaction.
- Orchestrated an **Admin Portal** for streamlined operational management, including promotional campaigns and menu updates.
- Seamlessly integrated the Vue.js application within a **Laravel Blade** codebase, ensuring a cohesive user experience.
- Designed a robust **MySQL** database schema for promotional campaigns, utilizing Laravel's Morph relationships to achieve high levels of flexibility and scalability.
- Implemented **Saga Orchestrator** for Order and Payment Services to compensate or refund the payment in case of a failure when placing an order.
