CAREER SUMMARY

Project: Migration of Legacy Healthcare System to Modern Architecture

Highlights:

- Spearheaded the migration of a legacy healthcare system, including Payroll and Employee modules, from VB.NET and JavaScript to Angular and ASP.NET Core microservices.
- Authored T-SQL scripts for bulk operations and CRUD Stored Procedures, facilitating seamless integration with the new application architecture.
- Employed ScriptDom parser for programmatic parsing of Transact-SQL (T-SQL) statements and expressions, ensuring accurate data migration and system functionality.
- Utilized Dapper for SQL Command, SQL Query, and Stored Procedure execution, enhancing database interaction and performance.
- Implemented table aliasing scripts to decouple schema dependencies, enabling a smooth transition to the new microservices-based database architecture.
- Configured GitHub workflows and actions to automate NUnit unit testing for .NET projects, SonarQube code quality checks, Docker image creation, and build compilation.

Project: SKU World Product Catalog Management

Highlights:

- Orchestrated the upgrade of the SKU World project from Angular 10 to 14, resolving development environment configuration issues.
- Developed backend APIs in C# and .NET Core 3.1, leveraging Azure Blob Storage, Azure SQL Databases, and Azure Functions for robust data management.
- Built the SKU World Customer Portal from scratch using Angular 15 and Tailwind CSS. Designed as a multi-tenant application, the portal offers customized, CRUD-intensive interfaces for various builders.

Sub-Project: Field Mapping Extension for SKU World

Highlights:

- Developed a smaller extension project in Vue.js for mapping source fields of products, seamlessly integrating it into the main Angular application through Azure Static Apps.

Technologies:

- **Languages:** VB.NET, JavaScript, Angular, ASP.NET Core, C#, T-SQL
- **Frameworks:** .NET Core 3.1, Angular 10/14/15, Vue.js, Vuetify
- **Database:** SQL Server, Azure SQL Databases
- **Cloud Services:** Azure Blob Storage, Azure Functions
- **CI/CD:** GitHub Workflows and Actions, SonarQube, Docker, NUnit
- **Front-end:** Tailwind CSS

- **Other Tools:** Dapper, ScriptDom Parser

EMPLOYMENT HISTORY

Sr. Software Engineer, Realleads Inc

Lenexa, Denver, USA

Jan 2021 — Present

Worked on migrating a legacy health care system with Payroll and Employee modules written in vb.net and javascript to modern angular and asp.net core micro services for each module. It involved drills to write TSQL scripts to run bulk operations to create CRUD StoredProcedures that will be used with the new app and programmatically parse Transact-SQL (T-SQL) statements, expressions in existing stored procs and table functions.

We were heavily involved in programmatically parsing Transact SQL (T-SQL) with the ScriptDom parser.

Worked with Dapper to write SQL Command, SQL Query, StoredProcedures.

Generate Table Alias using scripts to separate out the coupled schema in an effort to not have a schema table to call a stored proc outside of its schema. This was done to ensure a smooth transition to the new database for the microservice.

Setup Github workflows and actions to run unit tests in nunit for .net projects and do a round of sonarqube for code quality, make sure that the docker images are created correctly and each project was build and compiled properly

SKu world project to manage the products catalog for manufacturers, builders and distributors. We upgraded the project from angular 10 to 14 and fixed some problems with development environment configurations.

Backend apis were in C#, Dotnet COre 3.1 with Azure Blob Storage, Azure SQL Databasesm Azure Functions.

We built Sku World Customer Portal from scratch in angular 15 with tailwindcss to consume and display the data for builders. This was built as a multi tenant app customized for each builder, very CRUD intensive.

Sr. Software Engineer, Geekinn

Lahore, Pakistan

Dec 2021 — Aug 2023

Diverse Software Engineering Initiatives Across Multiple Platforms

Highlights:

- Engineered Node.js-based microservices, hosted and managed via PM2 on AWS EC2 servers, to create a scalable and reliable backend infrastructure.
- Established a dedicated EC2 server featuring an ETL pipeline, enabling developers to run, debug, or update listing data seamlessly.
- Developed API microservices using Laravel/Lumen, integrated with a Java Spring Boot API Gateway and Service Discovery, to create a cohesive and efficient service architecture.
- Implemented AWS services including Lambdas in C#, Step Functions, CloudWatch logs, DynamoDB, and Elastic IP, further enhancing system robustness and scalability.
- Orchestrated the migration of an Angular-based Real Estate Marketplace to Next.js, focusing on achieving blazing-fast performance and an impressive UI/UX.
- Utilized Bitbucket and GitLab Pipelines for version control and CI/CD, while employing Jira and Confluence for effective project management.

- Managed a monorepo using Lerna, containing a client-facing Nuxt.js application and an Admin Portal CMS built in Vue.js and Vuex, for comprehensive management of Agent's Listings, Offices, and Teams data.
- Upgraded an existing Nexus Repository Manager hosted on an EC2 server, ensuring compatibility and performance improvements.
- Configured a PHP SAML server to act as an Identity Provider for Okta, enhancing security protocols.
- Implemented a Consent Feature on the CMS, leveraging Twilio for SMS-based user consent collection, complete with end-to-end test coverage in Cypress.
- Implemented a Popular Searches Nearby Feature in C# lambda and Elasticsearch.
- Wrote a translator node script to perform English to French Translations based on a source excel file. The output was a json that was intended to be consumed in nextjs project.
- Authored extensive unit tests using PHP Unit and established a pipeline stage for linting, utilizing PHP Fixer to ensure code quality.

Technologies:

- **Languages:** Node.js, Java, C#, PHP, JavaScript
- **Frameworks:** Laravel/Lumen, Spring Boot, Angular, Next.js, Nuxt.js, Vue.js, Vuex
- **Cloud Services:** AWS EC2, AWS Lambdas, AWS DynamoDB, AWS CloudWatch, AWS Elastic IP, AWS CodeBuild
- **Database:** MySQL, DynamoDB
- **CI/CD:** Jenkins, Bitbucket, GitLab Pipelines
- **Project Management:** Jira, Confluence
- **Testing:** Cypress, PHP Unit
- **Other Tools:** PM2, ETL Pipelines, Nexus Repository Manager, Lerna, Twilio, Okta, PHP SAML, PHP Fixer

Software Engineer, Geekinn

Lahore, Pakistan

May 2020 — Dec 2021

Project: Development of Property Validator Tool in Vue.js and Vuex

Highlights:

- Architected and implemented a Property Validator Tool, leveraging Vue.js and Vuex to create a robust, user-friendly interface.
- Orchestrated asynchronous tasks through Laravel Jobs, and designed a user interface for cron job scheduling and management using Laravel's built-in scheduler.
- Integrated multiple data sources to synchronize with the validator tool, ensuring comprehensive and up-to-date information.
- Utilized the Real Estate Transaction Standard (RETS) Listing Search API, a legacy XML-based standard, to fetch and replicate MLS listing and roster data to a local database.
- Established secure SSH connections between backend API servers and external secured servers, enabling automated script executions for data synchronization.
- Introduced an MLS Listing Field Mapping feature, allowing users to map source fields to destination fields with an option for manual overrides.
- Integrated and executed new queries and mutations for Persons API (PAPI), a GraphQL layer on an Elasticsearch cluster, to facilitate seamless data consumption.
- Employed MySQL and PostgreSQL for general data storage, while utilizing Elasticsearch for storing real estate listings and their corresponding data.

- Integrated a feature to display Kubernetes logs directly from Pods, while also providing a user interface option for restarting failing pods, enhancing system monitoring and operational efficiency.

Technologies:

- **Languages:** PHP, JavaScript, SQL, GraphQL, XML
- **Frameworks:** Laravel, Vue.js, Vuex, Bootstrap
- **Libraries/APIs:** RETS Listing Search API, RESO WebApi, Writeback
- **Database:** MySQL, PostgreSQL, AWS RDS,
- **Full-Text Search Engine:** Elasticsearch
- **Other Tools:** Laravel Scheduler, SSH

Junior Software Engineer, Greyneon

Lahore, Pakistan

Jun 2019 — May 2020

Project: Version 2 Implementation and Deployment of Order-Taking App for a Leading Local Restaurant

Highlights:

- Engineered a location-based promotions feature, leveraging native PHP to accurately determine geolocation without reliance on third-party services.
- Integrated Google Maps API within a Vue.js framework to dynamically assess whether a user's current location qualifies for location-specific promotions, represented as polygonal areas.
- Developed a real-time, interactive menu interface featuring flexible nested categories, enabling intuitive navigation and effortless reordering of menu items via drag-and-drop functionality.
- Introduced the "My Bowl" feature, empowering users to customize their meals by selecting from an array of available ingredients, thereby enhancing user engagement and satisfaction.
- Orchestrated an admin portal for streamlined operational management, including promotional campaigns and menu updates.
- Seamlessly integrated the Vue.js application within a Laravel Blade codebase, ensuring a cohesive user experience.
- Designed a robust database schema for promotional campaigns, utilizing Laravel's Morph relationships to achieve high levels of flexibility and scalability.

Technologies:

- **Languages:** PHP, JavaScript
- **Frameworks:** Laravel, Vue.js
- **Libraries/APIs:** Google Maps API
- **Database:** SQL (Schema Design)
- **Cloud Platforms:** Digital Ocean Linux Instance

SKILLS

Technoloigies

Front-end Development:

- React.js (Redux, Context API)
- Next.js (NextAuth)
- Angular (Versions 13, 14, 15, 16)
- Vue.js (V2, V3 - Options & Composition APIs, Vuex, Vuetify)
- Nuxt.js
- Tailwindcss, Angular Material, Material UI

Back-end Development:

- .NET Core (Nexus Repository Manager, Clean Architecture, xunit, EF Core, MediatR, Mapster, Automapper, Dapper, Stored Procedures, Table Valued Functions, Views)
- Node.js (Express.js Micro-services, APIs, Socket.io, PM2, yarn, npm)
- Laravel & Lumen (PHPUnit, Private Packages)
- Java (Spring Boot, Gradle, Hibernate)

Database Management:

- MSSQL, MySQL, MongoDB, Redis
- AWS RDS, Kafka, DynamoDB
- ELK Stack (Elastic Search, Logstash, Kibana)

API Development:

- REST, GraphQL, gRPC, Postman, Swagger, OpenAPI

Mobile App Development (Hybrid):

- Ionic 5 with Angular.js & Cordova

SDKs & Libraries:

- AWS SDK, Python 3 (Boto3, Pip, venv, SAM)
- GitLab SDK (PHP)
- Google Maps API (React & Vue)
- Google Gmail API (Python)

Cloud:

- AWS (EC2, S3, Lambdas, CloudFront, ECS, EKS, RDS, SES, CloudWatch RUM)
- Azure (DevOps, Cognitive Search, SQL Databases, Azure Functions)
- Elastic Cloud
- Digital Ocean

DevOps & Version Control:

- Jenkins, Docker, Kubernetes, Gitlab CI/CD
- VCS (GitHub, GitLab, Bitbucket)

OS:

- Windows 10 Server
- MacOS
- Ubuntu (Linux)

Project Management

- Roadmap Planning and Execution Process
- Team Mission, Long-term Vision, and Strategy
- Project Retrospectives

Team Management

- 1:1s with Team Members
- Building Trust in Relationships With Team Members
- Managing Low Performers
- Managing High Performers

IDE Editors

Jetbrains Rider Ultimate

Jetbrains IntelliJ IDEA Ultimate

Jetbrains Fleet

Visual Studio Professional & Mac

Visual Studio Code

PROJECTS

Builder Customer Portal

2023 — Present

Created a customer portal aimed at simplifying the home-building process. The frontend is built using **Angular**, **Tailwind CSS**, and **Angular Material**, while the backend leverages **.NET Core 3.1** and **MSSQL**. The portal offers a user-friendly interface for customers to interact with builders, thereby improving customer satisfaction and operational efficiency.

SkuWorld

2022 — Present

Engineered a platform that serves as a vital link between manufacturers, builders, and distributors in the house-building industry. Utilizing Angular for the frontend, complemented by **CSS Bootstrap** and **Angular Material**, and **.NET Core 3.1** for the backend along with **Azure SQL Databases**, **Cognitive Search**, **Azure DevOps**, **Azure Blob Storage**, **Azure Functions** for version control and deployment pipelines, the platform streamlines the supply chain and enhances collaboration among stakeholders.

PDI

2023 — 2023

An extension tool for SkuWorld to see in depth mapping management of product data written in **Vue.js**

TaxBox

2023 — 2023

Developed a specialized search engine using **.NET Core 7** and **Elasticsearch** for a UAE consultancy firm. The engine has processed over 1 million tax-related articles, providing invaluable insights. The admin portal Made with developer experience first: **Next.js**, **TypeScript**, **ESLint**, **Prettier**, **Husky**, **Lint-Staged**, **Jest**, and **Commitlint**.

Sellify

Dec 2022 — Apr 2023

Developed an advanced CRM system designed to revolutionize sales and customer relationship management. Built on a robust **AWS Serverless** architecture, the system integrates **Lambdas** written in Python 3.8, **AWS API Gateway**, **AWS Cognito**, **AWS SQS**, and **AWS SES** for notifications. With **Next.js** powering the frontend, the deployment was managed using **AWS SAM (Serverless Application Model) as IaC (Infrastructure as Code)** the **CRM** is a comprehensive solution for managing product catalogs, lead conversions, orders, and sales agent commissions. It serves as an indispensable tool for over 10,000 sales agents, optimizing their workflows and boosting productivity.

Real Estate MLS CRM

2019 — 2022

Architected a comprehensive CRM system for real estate professionals using **Vue.js**, **Laravel**, and **AWS** technologies. The platform empowers agents to seamlessly manage listings, leads, and transactions, contributing to over \$10 million in closed deals for more than 100 agents.

Real Estate Property Search API

2019 — 2023

Developed a high-performance, data-oriented API in **Express.js** with **TypeScript** that serves as a versatile proxy server with API gateway capabilities. The API is a key resource for over 100 real estate websites, enabling efficient property searches.

Property Data Validator Tool

Aug 2019 — 2021

Engineered a property data validation tool using **Vue.js** and **Laravel**, **PostgreSQL**, and **Elasticsearch** equipped with backfilling capabilities. The tool has validated over 1 million property records, ensuring data integrity and accuracy.

Data Sync and Back-filling Microservices

2020 — 2021

Deployed a robust server hosting multiple **Express.js** microservices, managed via **PM2** and hosted on an AWS **EC2** Linux Instance. These microservices facilitate seamless data synchronization and backfilling across systems, boasting a year-long uptime record.

PyWeb Scraper

2021 — 2021

Crafted a web scraper using **Python** and **Scrappy** that automates lead generation by crawling public websites. The tool has been instrumental in generating valuable leads for over 100 businesses.

My Patente

2020 — 2020

Designed and developed a driving license training app specifically tailored for the Italian market. Utilizing **Ionic** with **Angular**, the app simplifies the license training process for non-native speakers. It was published on the Google Play Store. The admin portal was written in **Vue.js (Vuetify)** and **Laravel**, **MySQL** and was deployed on a **Linux** instance with **Nginx** Server.

The WOK

2019 — 2019

Engineered a food ordering app that revolutionized the dining experience by offering real-time menu customization and location-based promotions. Built with **Ionic** and **Angular**, the app has been a hit on both Google Play and Apple Stores, amassing over 3,000 users and generating revenue exceeding \$10,000.

OrderTaking

2019 — 2019

Created an intuitive admin panel using **Laravel** and **Vue.js** that streamlines order and customer management for businesses. The platform is currently leveraged by over 100 businesses to enhance their operational efficiency in order management.

EDUCATION

BSc (Hons) Computer Sciences, University of Engineering and Technology Lahore

Lahore, Pakistan

Aug 2015 — Aug 2019

Bachelors of Sciences Honors in Computer Sciences

COURSES

ChatGPT Prompt Engineering for Developers, Deeplearning.ai

Mastering the AWS Serverless Application Model (AWS SAM), AWS Online Tech Talks

Next.js Crash Course, Traversy Media

React JS Crash Course, Traversy Media

EXTRA-CURRICULAR ACTIVITIES

Reading and Writing Technical Blog on Medium , Medium

Apr 2023 — Present

Trekking , Northern Pakistan

Jan 2018 — Present

Table Tennis, Local Community Clubs

Jan 2016 — Present
